Connect the data.
Change the story.

When local authorities connect data from multiple sources, they can get the full story and change outcomes for the better.

Capita's **Single View** helps you spot crucial connections in society sooner. It works by combining data sources to flag vulnerable people and unfolding situations that would otherwise remain hidden – and, importantly, before they escalate. All of which allows you to address important initiatives such as the Levelling Up agenda, and make a difference to:

- Integrated Care Systems
- Food poverty
- The cost of living crisis
- Supporting Families

Capita's Single View

How it works

See data from all of your sources in one place with Single View dashboards, and make more timely decisions based on proactive deprivation indicators. Realtime Data Integration Reporting helps you interpret data to make early interventions, so you can safeguard families, children and vulnerable adults... **before they reach crisis point.**

Reduce poverty
and deprivation

Overcome challenges
caused by the pandemic

Support key
government programmes

Ultimately improve the
life chances of all involved

Your current challenges

With Capita's Single View, you can:

You're faced with a range of barriers when it comes to integrating data. Such as:

Legal – like setting up data sharing agreements.

Cultural – like siloed working and thinking.

Technological – like a hard-to-navigate legacy IT infrastructure.

De-silo data and overcome blind spots by integrating sources seamlessly and securely.

- Get going in as little as four weeks with our out-of-the-box solution.
- Gain peace of mind with 'read only' data sharing agreements and comprehensive auditing capabilities.
- Alleviate bottlenecks by giving more people the power to view and understand reporting.

You have access to lots of data

However, you're unsure how to use it effectively.

Meaning you can't see – or act on – connections between different sources.

Spot opportunities for intervention sooner by connecting data points.

- Easily access a single, integrated version of the truth.
- See intelligent, real-time dashboards and outputs that combine multiple data sources.
- Make proactive – rather than reactive – decisions and interventions through deprivation indicators that reach out on your behalf.

You can't identify or prioritise cases for support, initiatives or bursaries.

Deploy support, funds and resources where they're needed most.

- Prioritise actions to secure the best outcomes.
- Help practitioners save time and become more effective.
- Evidence more transformations and, in turn, claim more money for future support (Payment by Results).

You're mandated to Level Up and deliver on initiatives and agendas from central government.

Improve outcomes and communities – and protect society's most vulnerable people.

- Help more vulnerable families, children and adults.
- Meet the demands of the Levelling Up agenda.
