

Cybersecurity infosec management / virtual CISO

Overview

Although the global cybersecurity skills shortage has fallen for the second consecutive year, the size of the workforce is still 65% short of current demand.* At the c-suite level this shortage is even more acutely felt.

Organisations that need strategic leadership in cybersecurity, may find it too expensive and protracted to recruit a full-time, Chief Information Security Officer.

Capita virtual CISO gives our clients the ability to rapidly deploy senior, industry-aligned professionals, with a vast experience of cyber and information security on a retained basis. Our clients have found this to be a more cost-effective way to establish their cyber practice without the expense of a full-time employee and to deal with short-term threats or needs. The virtual CISO becomes your dedicated, trusted advisor with the added benefit of reach back into the Capita brand to fully utilise the technical capabilities we have on offer, avoiding the need for lengthy demos and negotiations.

The virtual CISO reports into board level to lead on the formulation of strategy and oversees the delivery of cyber and information security initiatives. The role can be remote or on-site. As the organisation's maturity develops, the Virtual CISO can also assist in the creation of teams and recruitment of permanent team members, providing a trusted, go-to resource who will support your business.

Our approach

Our proprietary framework, which is used and trusted by Capita's largest clients in both the public and private sector is a 1-week engagement where we:

Candidate sourcing and deployment
